Rotaract.....Linda Krupp
Past President.....Bill McCarthy
MembershipMark Amos

“Celebrate Rotary”

The Object of Rotary is to encourage and foster the ideal of service as a basis of worthy enterprise and, in particular, to encourage and foster:

FIRST. The development of acquaintance as an opportunity for service;

SECOND. High ethical standards in business and professions, the recognition of the worthiness of all useful occupations, and the dignifying of each Rotarian’s occupation as an opportunity to serve society;

THIRD. The application of the ideal of service in each Rotarian’s personal, business, and community life;

FOURTH. The advancement of international understanding, goodwill, and peace through a world fellowship of business and professional persons united in the ideal of service.

OUR OPENING SONG

*I want to wake up in the morning
Where the orange blossoms grow,
And the sun comes peeping
Into where I’m sleeping
And the song birds say hello.
I want to wander in the
orange grove
As I used to long ago,
And go drifting back to Florida
Where the orange blossoms grow...*

Tuesday	7:30am	Melbourne Beach	Beach Street Eatery, Ocean Ave.

Key:

P=Past President

H=Paul Harris Fellow: Given a total of \$1,000 or more to RI (lifetime)

h=Paul Harris Sustaining Member: Given \$100 or more during current year

E=Club Endowment Fellow

e=Club Endowment Sustaining Member

This week's program

Connected by 25
Julie Irving

Sandy Sanderson, fellow Cocoa Rotarian with Florida Power and Light was our featured speaker for June 9, 2009. He presented information about the upgrade of the FPL Cape Canaveral site.

History: The original Cape Canaveral power plant, Unit 1, started operating in 1965; Unit 2 followed in 1969. The plant is capable of producing electricity by burning either gas or oil. The generating capacity at the site is 800 megawatts. Cape Canaveral was originally conceived to provide power for a growing region as well as the Space Center.

Project Site: The plant site is located on 42 acres of flat, sandy area between Cocoa and Titusville, Florida. The site is bounded on the east by the Intracoastal Waterway/ Indian River and on the west by U.S. 1. Across the river from the plant is the Kennedy Space Center.

Plant Design: After the modernization is complete, the site will contain a high-technology combined cycle natural gas unit. The unit will produce approximately 1,250 megawatts of electricity or enough to power 250,000 homes and businesses. The new design will have a sleeker profile, with stacks about half as tall.

Economic Benefits: The modernized energy centers proposed for Riviera Beach and Cape Canaveral will be considerably more efficient than the existing facilities, using at least 33 percent less fuel to produce the same amount of power. The combined savings to customers will be about \$450 million. The project will generate an additional \$12 million in tax revenue in its first full year of operation alone. That translates into \$5.3 million for Brevard County schools, \$4.8 million for Brevard County; and \$1.6 million for other taxing authorities.

Environmental benefits: The modernized units will contribute to an improvement in air quality at these sites by reducing particulate emissions by 88 percent. The rate of carbon dioxide emissions at the energy centers will improve by 50 percent. That translates into a CO2 reduction of 900,000 tons in the first year alone, or the equivalent of removing 200,000 cars from the road, according to the U.S. Environmental Protection Agency. The primary water source for the cooling system will be the Intracoastal Waterway/ Indian River, just as it is today. The office building at the site will feature rooftop solar panels and will be certified as environmentally sustainable under the U.S. Green Building Council's Leadership in Energy and Environmental Design (LEED) rating system. For more info go to www.FPL.com/Cape.
